Module Name:	BVA & Equivalence Partitioning - Instagram Bio & Caption Hashtag Fields						
Test Case ID:	st_07						
Tester Name:	Aman Sevak						
Test Case Description:	To apply Boundary Value Analysis (BVA) and Equivalence Partitioning techniques for validation testing of the Instagram Bio field (character limit) and the New Post Caption hashtag field (hashtag count limit).						
Prerequisites:	1. Instagram app installed and logged in 2. Stable internet connection 3. Access to Edit Profile > Bio 4. Access to New Post > Caption						
Environment Information:	OS: Android System: Mobile Phone Application: Instagram (Mobile App)						

Scenario ID	Scenario	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
1a	Bio field - enter minimum valid input (1 character)	1. Open Profile > Edit Profile > Bio 2. Enter a single character 3. Observe character counter	Single character ("h")	Field accepts input; character counter updates to 1/150	Counter updated to 1/150	**Pass**	Valid minimum boundary (BVA: min value)
1b	Bio field - enter a valid mid-range input (27 characters)	1. Continue typing in the Bio field 2. Enter text totaling 27 characters 3. Observe character counter	27-character string	Field accepts input; character counter updates to 27/150	Counter updated to 27/150	**Pass**	Confirms valid equivalence class (mid-range values accepted normally)
1c	Bio field - enter maximum boundary input (150 characters) and attempt to exceed it	1. Continue typing in the Bio field until the limit is reached 2. Attempt to type additional characters beyond the limit 3. Observe character counter	150-character string, then 1 additional character	Field accepts exactly 150 characters (counter shows 150/150); further input beyond 150 is blocked	Counter shows 150/150; additional characters had no effect (input capped)	**Pass**	Confirms upper boundary (max) enforced correctly
2a	Caption field - enter a valid hashtag	1. Go to New Post > Add Caption 2. Type a hashtag, e.g. "#1" 3. Observe hashtag suggestion list	"#1"	Field accepts input and displays related hashtag suggestions with post counts	Suggestion list displayed (e.g. #100kviews, #15august, #10kfollowers)	**Pass**	Confirms valid equivalence class for hashtag input
2b	Caption field - enter multiple hashtags approaching the allowed limit	1. Continue typing in the Caption field 2. Add several hashtags/symbols in sequence 3. Observe whether input is accepted	"#1#2#49[>:'"	Field accepts input up to the allowed hashtag count	Input accepted; caption field displayed the entered text	**Pass**	Verifies system behavior for consecutive hashtag entries approaching the limit
2c	Caption field - exceed maximum hashtag limit (6th hashtag, upper boundary + 1)	1. Continue adding hashtags in the Caption field beyond 5 2. Attempt to add a 6th hashtag 3. Observe system response	6th hashtag entry	System should restrict/warn that only 5 hashtags are allowed	Warning message displayed: "You can only add 5 hashtags to your caption."	**Pass**	Confirms upper boundary limit (5) is correctly enforced with a proper validation message

Summary Of Test Results:	
Total Test Cases	6
Passed	6
Failed	0
Pass %	100%
